## The Embraer E195-E2 Tech Eagle “Profit Hunter” made a stopover in Luxembourg

*The Embraer E195-E2 Tech Eagle “Profit Hunter”, the same aircraft model that Luxair will soon introduce into its fleet, made a stopover in Luxembourg.*

In order to anticipate the entry into its fleet of the E195-E2, which will be delivered in the coming years, Luxair hosted the Tech Eagle “Profit Hunter” in Luxembourg. As a reminder, Luxair signed a firm order for four E195-E2s, the most efficient regional aircraft in the single-aisle segment, and has secured delivery positions for five additional Embraer E2s.

“We are happy to welcome Embraer’s E195-E2 Tech Eagle ‘Profit Hunter’, the same jet model that we are going to welcome into our fleet soon. This is strategic for Luxair, marking our continued commitment to sustainable aviation, passenger comfort, and quieter skies. With the E2, Luxair can simultaneously realize its growth, profitability, and sustainability ambitions. The E2 small narrow-body aircraft also adds flexibility and creates new opportunities for our network while complementing Luxair’s larger narrow-body aircraft,” states Gilles Feith, Luxair CEO.

“Embraer is excited to be showcasing the E2 Tech Eagle with our friends at Luxair. This advanced aircraft will closely complement Luxair’s existing and on-order fleet, ensuring the maximum level of fleet and network optimization to the airline. The E2’s advanced technology, aerodynamics, and avionics come together to deliver the most efficient aircraft in its segment, reducing costly fuel burn and emissions by 25%, and noise footprint by more than 50%, over the previous generation aircraft. The aircraft is set to have a considerable impact when it joins the airline,” comments Marie-Louise Philippe, Vice President Sales & Marketing, and Head of Region for Europe and Central Asia, Embraer Commercial Aviation.

To showcase the E2’s capabilities in achieving exceptional efficiency, sustainability, and performance, Embraer has introduced a new persona for the E195-E2 - the “Profit Hunter.” To embody this persona and market the product globally, new liveries featuring apex predators were created for the E2’s nose cone, including a Tech lion, Tech shark, and the latest version - a Tech eagle. The striking imagery, with its unique circuitry design, highlights the E2’s advanced technology and innovation.

The largest aircraft in the E-Jet E2 family, the E195-E2 has been designed to maximize returns and efficiency on high-density routes. With its high-aspect ratio wings and swept tips, combined with other aerodynamic improvements, the E195-E2 achieves double digit lower fuel consumption compared to current-generation E-Jets.

By investing in new aircraft, Luxair is dedicated to providing passengers with an enhanced flying experience while realizing operational savings and minimizing its environmental impact. The Embraer E195-E2 exemplifies Luxair's commitment to innovation and passenger comfort. With its technological advancements and ergonomic design, the Embraer E195-E2 delivers an outstanding flying experience, reducing both emissions and operating costs.
